

Database Systems - Lab1

Question-

Create a database with the name “**ERP_uncrashed_db**” and then create the required tables for entities/relationships based on the following ER diagram. You must ensure that you add proper primary keys and reference appropriate foreign keys in your design.

Populate the entity tables using the **INSERT** query and use **SELECT** query for verification.

Evaluation:

1. You must switch off your monitors once the time is finished.
2. Copy the results of **SHOW TABLES** and **DESC <table name>** (for all created tables) commands in a text file which will be evaluated.
